Increase value APT::Cache-Limit When the time I try to install backtrack unfortunately i got message error in the terminal :

```
Reading package lists... Error! E: Dynamic MMap ran out of room. Please increase the size of APT::Cache-Limit.
Current value: 25165824. (man 5 apt.conf)
E: Error occurred while processing riece (NewVersion1)
E: Problem with MergeList /var/lib/apt/lists/archive.offensive-security.com_dists_pwnsauce_universe_binary-
i386_Packages
W: Unable to munmap
E: The package lists or status file could not be parsed or opened.
```

and solution to fix it is just increase the value APT::Cache-Limit at the /etc/apt/apt.conf.d/70debconf.

```
sudo gedit /etc/apt/apt.conf.d/70debconf.
```

Then put this code

```
APT::Cache-Limit "1000000000";
```

at the below on that file and then save it.

Next typing this code on your terminal `sudo apt-get clean && sudo apt-get update --fix-missing` and you won't find apt cache limit again in the next time.

Good luck..

0.000000 0.000000
